Unlimited Water Solutions

About Azulatis

- ✓ **INTEGRATED WATER SOLUTIONS**
- ✓ **+65 WATER INSTALLATIONS IN OPERATION**
- ✓ **+15 YEARS EXPERIENCE**
- ✓ **DBFMO PARTNER**
- ✓ **ACTIVE IN BELGIUM, THE NETHERLANDS & FRANCE**

Azulatis provides full service in tailor made water solutions for industrial and public organizations with significant water needs.

→ Process Water Treatment

Different water sources are treated to drinking water qualities and beyond.

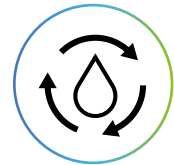

Tap Water

Surface Water

Ground Water

Recycled Water

→ Waste Water Treatment

Waste water is purified to the right quality for discharge (WWTP) - the water can also be treated for reuse.

Factory Waste

Innovation

Waterproof Service

Sustainable Solutions

How Azulatis works

Projects by Azulatis are mainly **Water-as-a-service (DBFMO)**, where the process is carried out from start to finish, and options inbetween.

D Design

At Azulatis, design is not just about engineering — it's about translating years of operational experience into smart, reliable solutions. By designing with the operator's mindset, we ensure that every system works — not just in theory, but in the field.

B Build

Independent partners are called upon to build the infrastructure and treatment plants. This selection follows a rigid procedure to obtain only the best suited partners for each project.

F Finance

The capital investment is incurred and financed by Azulatis. Optimal project financing is checked on the basis of the cash flow patterns.

M Maintain

We prioritize reliability through preventive maintenance. By regularly inspecting and servicing our systems, we maximize uptime and extend equipment life. This proactive approach ensures consistent performance and long-term efficiency.

O Operate

Azulatis manages its production sites through continuous online monitoring of water quality and production volumes. Dedicated intervention teams are available 24/7 to implement corrective process measures remotely or carry out on-site interventions.

What we do for our clients

Case: Coca-Cola

“Coca-Cola is constantly looking for the best ways to manage water. Azulatis is the best fit for our internal needs & requirements, they think beyond maintenance & operations, also handling design & planning aspects.”

— Axel Haest, Environment Manager, Coca-Cola

Case: Alpro

“For several years now, our DBMO partnership with Azulatis has ensured reliable operation of the water reclaim system at Alpro Wevelgem. It consistently delivers high-quality process water from treated wastewater—covering up to 50% of our needs. A long-term solution built on trust, performance, and sustainability.”

— Dominique Hamerlinck, Int. Energy Manager, Alpro

Why Azulatis

✔ **TRUSTED ADVISOR**

✔ **LONG-TERM PARTNER**

✔ **COMMITTED EXPERT**

✔ **VALUE ORIENTED**

→ **Selection of most suitable water source**

Assessing and selecting the most appropriate water source based on the project location, quality, availability and alignment with the client's operational needs.

→ **State-of-the-art technology**

Integrating state-of-the-art technology to ensure maximum efficiency, reliability and sustainability across every phase of the water solution.

→ **Optimal water quality and quantity**

Delivering optimal water quality and quantity means more than meeting technical specifications - it's about ensuring reliability, sustainability, and performance across the full lifecycle of industrial water solutions.

→ **Deliver best-in class Total Cost of Ownership (TCO)**

Delivering turn key water solutions with full scope engineering, automation and commissioning. The project design & construction minimizes future maintenance and energy costs, contributing to a lower TCO over its lifecycle.

Azulatis contributes to improve the ESG ratings of its customers and to achieving the UN's Sustainable Development Goals.

Circular model to prevent scarcity by reusing water

A circular model is an essential solution for water scarcity. Waste water is reused and raw materials and energy are recovered where possible. This leads to a drastic reduction in water consumption, to a more sustainable water chain and contributes to the protection of our living environment and future generations.

Sustainable economy

Companies are becoming more and more aware of their impact on society, with a trend towards more sustainability and a circular economy.

Government stimulus

Due to their positive societal impact, circular systems are supported by governments and organizations around the world, such as the United Nations by means of their sustainable development goals.

New technologies

The increase in the number of circular systems for water treatment is facilitated by the development and improvement of the technologies used.

Leakage limitation

Currently, 14,7% of tap water in Belgium is lost through leaks. Decentralized systems require fewer pipes and limit leaks, which contributes to sustainability and cost-effectiveness.

By managing the entire circular water chain - from source to consumption and treatment - Azulatis guarantees fully integrated solutions that deliver operational excellence and long-term reliability.

Shareholder structure

De Watergroep

De Watergroep has 100 years of experience in water. The company is active in the regulated market. It is the largest drinking water company in Flanders, Belgium.

TINC

TINC is a listed investment company active in the infrastructure sector. TINC holds a diversified portfolio of participations.
